TITLE INDEX

Algorithm for the N/M/parallel/Bmax preemptive due-date scheduling problem, An, 43
Bicriterion jobshop scheduling with total flowtime and sum of squared lateness, 295

Capital budgeting and plant capacity, 233
Costs of disposal of sewage sludge: A case study, 133

Decision network application to batch size determination for single-stage system, A, 143
Dynamic simulation of mobile robot navigation in warehousing environments, 211

Economic ordering for deterministic two-echelon distribution systems, 227
Economic production of a product and replenishment of its raw materials, 111
Engineering-economic evaluation of enhanced recovery of Saudi crudes by chemical flooding, An, 105
Experiences of different approaches in logistics, 155

Flexible manufacturing systems in practice — Results of a study of operational use, 259

Heuristic procedure for determining ordering and price-discount policies for commodities with two-period perishability, A, 177

Integrated time-functions and cost-functions as a basis for analysis of complex production systems, 95
Investing in reducing lead-time randomness in continuous-review inventory models, 191
Investment justification in flexible manufacturing systems, 203

Mathematical formulation of the economic dispatch problem of a power system by using a linear load flow model, 11
Mathematical modeling of the AGVS capacity requirements planning problem, 171
Minimizing production costs for a robotic assembly system, 81

Procurement under uncertain supply lead-times — A dual-sourcing technique could save costs, 59

Real-time part sequencing in a flexible assembly cell: System development and evaluation, 117
Reduction of manufacturing lead-time through selection of machining rate and unit handling size, 21
Replacement of auxiliary power supply system — A case study, 1
Review of research on AGVS vehicle management, A, 35

Sizing segregation bins in bulk conveyor systems with discrete loading sources, 69
Strategies in spare parts management using a reliability engineering approach, 51
Systematic machine-condition monitoring — A case study from Parenco paper mill in Holland, 277

Using multiple time-series analysis, of assembly-line production of automobile engines — A case study, 243
